Learn about meteorites, the difference between a meteor and a meteorite, and how to test a rock to see if it's a meteorite using our meteorite identification interactive guide. In addition, each year the Earth passes through the orbits of comets and the dust from these comets produce a meteor shower. Meteor showers happen as tiny bits of material from dust size to the size of a grain of wheat. They burn up almost completely high in the atmosphere dozens of miles above the Earth's surface. It's important to note that some people call these events meteorite showers but this is not accurate as meteor showers do not produce meteorites. Meteorite Types. There are three basic types of meteorites, the irons, stony, and the stony-irons. Each of these basic families h All about Comets, meteorites, and men by Peter Lancaster Brown. Share This Paper. Meteors, Meteorites and Impacts. A meteor is a bright streak of light in the sky (a "shooting star" or a "falling star") produced by the entry of a small meteoroid into the Earth's atmosphere. If you have a dark clear sky you will probably see a few per hour on an average night; during one of the annual meteor showers you may see as many as 100/hour.Â Samuel Taylor Coleridge's famous lines from The Rime of the Ancient Mariner: The upper air burst into life! And a hundred fire-flags sheen, To and fro they were hurried about! And to and fro, and in and out, The wan stars danced between. And the coming wind did roar more loud, And the sails did sigh like sedge; And the rain poured down from one black cloud; The Moon was at its edge.
