Vocational and technical education in Nigeria

R.N. Oranu

I. INTRODUCTION

Vocational and technical education in Nigeria has a chequered history. Given its humble beginnings, this aspect of education was misunderstood by educators in the larger society. Conceptually, educators could hardly differentiate between the terms vocational and technical education, while society had been led to believe that vocational education is for those who are incapable of pursuing academic programmes. Against this background, vocational and technical education has made slow progress from its earliest times to date.

For the purpose of clarity, vocational education is that skill-based programme designed for sub-professional level education and based on a specific vocation. Technical education, on the other hand, facilitates the acquisition of practical and applied skills as well as basic scientific knowledge. The major difference between the two terms is that, whereas vocational education is designed for a particular vocation, technical education does not target any particular vocation but gives general technical knowledge. Thus, while every vocational education programme is technical in nature, not all technical education programmes are vocational. This subtle relationship accounts for the interchangeable use of both terms in academic literature.

If we take Nigeria as an example, vocational education programmes are offered at the technical colleges while the polytechnics offer vocational and some technical education courses at the ordinary national diploma level. As part of the improved fortunes of vocational education, the current National Policy on Education (1998) has accorded a section to it clarifying its objectives with respect to the entire education system. Furthermore, the country’s increasing unemployment has helped to highlight the need for vocational education.

II. PROBLEMS OF THE NATIONAL EDUCATION SYSTEM

Despite the best intentions of successive Nigerian governments, vocational and technical education programmes are still fraught with problems, including: administrators’ misconception of the nature of vocational education, inadequate political will by the government, deficient educational monitoring and evaluation procedures, poor funding, poor incentives for teachers and a rapid rate of technological changes. I will not expand on these problems, but suffice it to state that the problems have to varying degrees, affected the advancement of vocational and technical education.

1. Problems related to curricula

More specifically, certain problems have related directly to the curricula of vocational and technical education. These problems include among others: inadequate emphasis on pre-vocational subjects at the primary and junior secondary levels, inadequate facilities, shortfall in
retical aspects were examined by CGLI in most of the
dy trade centres, trade schools). However, only the theo-
to certify students in technical institutions (former-
these bodies. 
was in 1960 that W AEC started acting as an agent for 
technical subjects, even after the establishment of 
conducted examinations in commercial and technical 
technical education through the 
establishment of NABTEB in 1992. NABTEB was 
the National Board for Technical Education for the 
National Technical/Commercial Studies certificate pro-
the 1985 reform 
made practical education an area for funding. There should be less emphasis on cer-
tificates/examinations in implementing the curricula 
the various programmes. Acquisition of prac-
tical skills should be stressed on the final outcome. 
IV. REFORMS
1. The history of Nigerian reforms

The history of reforms adopted in the Nigerian technical 
education system cannot be discussed without mention-
ing the examination and regulatory bodies that initiated 
them. Through their syllabi, the examination bodies have dictated the curriculum content and method of 
evaluation. In Nigeria, the Royal Society of Arts (RSA) and the City and Guilds of London Institute (CGLI) 
controlled the craft-level technical education through the 
conduction of examinations in commercial and technical 
subjects. These bodies continued to regulate the study of 
technical subjects, even after the establishment of 
WAEC (West African Examinations Council) in 1952. It 
was in 1960 that WAEC started acting as an agent for 
these bodies. 

Among other things, the objectives of RSA and CGLI 
were to certify students in technical institutions (former-
ly trade centres, trade schools). However, only the theo-
retical aspects were examined by CGLI in most of the 
trades. By the external regulation of what was taught in 
the technical institutions, the curricula were not struc-
tured to meet specific national development needs. Furthermore, the trainees were given scanty or no gener-
al education to supplement their chosen trades. 
In December 1972, WAEC took over the conduct of 
examinations in some technical and commercial subjects 
from RSA and CGLI. Within this structure, the federal 
government approved that the CGLI be supplemented 
with a qualification known as the Federal Craft 
Certificate (FCC) issued by the technical colleges. The 
Federal Craft Certificate incorporated practical aspects 
of the trades examined by CGLI. After the take-over by 
WAEC in 1978, it introduced practical sessions into its 
examinations. Even so, WAEC did not introduce more 
general education into the curriculum of these trades 
offered in the technical colleges. Thus, the graduates of 
these colleges were unable to secure admission in terti-
ary institutions. For this reason, the image of technical 
education remained tarnished as a programme for aca-
demically weak students.

The National Council on Education in 1985 approved 
the national curricula and module specifications evolved 
by the National Board for Technical Education for the 
National Technical/Commercial Studies certificate pro-
grammes in technical colleges. The main features of the 
reform include:
1. General education courses in English language and 
communication, mathematics, integrated physical 
science and social studies became mandatory compo-
nents of the technical curriculum;
2. Industrial staff and itinerant mechanics can be 
enrolled at the technical college to take specific trade 
modules relevant to their needs;
3. Trade theory and practice are integrated. 
Trade theory now included trade calculation and trade 
s science; no separate classes were held. The 1985 reform 
was replaced by the restructuring carried out by the 
National Business and Technical Examination Board 
(NABTEB) and was introduced in 1995.

2. Basic characteristics of the current reforms

The current reform took effect in 1995 following the 
establishment of NABTEB in 1992. NABTEB was 
charged with the conduct of technical and business 
examinations hitherto conducted (in Nigeria) by the 
RSA, CGLI and WAEC. The NABTEB based its exami-
nations on two parallel syllabi—NBTE modular curricu-
um and modified WAEC syllabi. The Board offers 
examinations in four trade areas: engineering trades, 
construction trades, miscellaneous trades and business 
studies (see Annex to this article).

The key objectives of NABTEB include, among other 
things, making their certificate equivalent to a senior sec-
ondary school certificate. The Board also strove to 
ensure that graduates of the technical college could 
obtain admission into relevant tertiary institutions (poly-
tecnics and universities). This was in response to the low esteem accorded to the graduates of technical colleges who could not secure admission into higher institution with the previous technical certificates because of the inadequate content of their general education. To this end, all general education subjects are made compulsory to all candidates and related trade subjects are chosen according to trades. The basic sciences were introduced as trade-related subjects. Practical aspects of every trade were emphasized and made part of the examinations.

In order to sustain the reform, the Joint Admission and Matriculations Board (JAMB) accepted the NTC and NBC certificates as being adequate for admission into institutions of higher learning. Furthermore, all technical colleges were required to affiliate with NABTEB for their examinations. NABTEB also embarks on accreditation exercises before a technical college is approved as an examination centre. The teaching language remained English, which has also been made a core aspect of the curriculum. The sciences were also made a core aspect of the curriculum.

The policy concerning textbooks is not obviously different from that obtainable in the whole education system. Since there is paucity of relevant textbooks, individual colleges are at liberty to recommend books that their students could purchase in the local markets. For this reason, there are no expressed policies on titles, how the texts are written or printed. Furthermore, individual technical colleges relate to the state ministry of education. Any other relationship with local or municipal governments is not usually administrative.

3. Analysis of the text of the current reform

To the extent that technical college graduates can now obtain admission into higher education institutions, the objectives have been achieved. However, most colleges are having problems in striking a good balance between the theory and practice of their trades. This sometimes results in graduates being weak in their practice. The emphasis on general and trade-related subjects vis-à-vis admission into higher education institutions made students concentrate less on the core skills of their trade, which usually require more time to acquire. In terms of strength, technical college students no longer feel inferior to those in the secondary school since they too can aspire to higher education. The emphasis on social studies and communication skills in the syllabi were designed to achieve the first three objectives, while the syllabi on trades are aimed at the last two objectives of the national policy on education. If the syllabi were adequately implemented, these objectives would be achievable. However, the paucity of textbooks and inadequate emphasis on practical skills are creating problems in graduating skilled students.

The lecture and project methods are the main teaching/learning strategies employed for implementing the curriculum. In the main, the strategies are content driven and certainly not child-centred. The teachers have to cover the content in order to ensure that students are able to pass the NABTEB examinations. Students are given ample opportunities to participate in the classroom instruction. The traditional method in which teaching reflects each discipline is still in use since the teacher has to concentrate on particular trades or modules.

Curriculum development involved experts from industry, vocational educators from the polytechnics and universities, and ministry officials. An interdisciplinary approach used in the learning process entailed introducing technical students to introductory metalwork, woodworking, engineering drawing and basic electricity, before they specialize in any trade. There are some opportunities for students in business studies. The syllabi claim to be employing process and product evaluation strategies. Their provision for continuous assessment scores in the final grade is adequate. However, the claim on use of criterion-referenced tests cannot be substantiated.

4. The linkages between curriculum reform and curriculum development

The main objectives of the national policy on education (1998) include building:
1. A free and democratic society;
2. A just and egalitarian society;
3. A united, strong and self-reliant nation;
4. A great and dynamic economy;
5. A land of opportunities for all citizens.

The sections on social studies and communication skills in the syllabi were designed to achieve the first three objectives, while the syllabi on trades are aimed at the last two objectives of the national policy on education. If the syllabi were adequately implemented, these objectives would be achievable. However, the paucity of textbooks and inadequate emphasis on practical skills are creating problems in graduating skilled students.

Indeed, the reform was not imposed by an international funding agency. Rather the reform was informed by the need to improve the image of technical education. Restructuring technical education to reflect the social demands satisfied the expectations of the people. Despite these positive points on the reform, the global demand for modern information technology has not been satisfied in the curricula. Furthermore, the cluster approach and multiple-skills orientation in modern vocational education have been de-emphasized and replaced by the modules.
ANNEX: AN OUTLINE OF THE CURRENT CURRICULA

NABTEB has thus taken over the existing WAEC Technical/Business Examinations. Technical and Business Examinations conducted by NABTEB lead to the award of the National Business Certificate (NBC)/National Technical Certificate (NTC). For some time to come these certificate examinations will be based on two parallel syllabi—NBTE Modular Curriculum Syllabi and Modified WAEC Syllabi.

Candidates are required to indicate their choice of examination syllabi. The Board offers examinations in the following four trade areas, based on the indicated syllabi:

1. Engineering trades;
2. Construction trades;
3. Miscellaneous trades;

Consequently, eight booklets, two for each of these four areas, have been published. Each also contains general education subjects and trade-related subjects.

The table of contents of each booklet shows where to find the contents of the syllabi on various subjects, be they general education, trade-related or main trade subjects. The following tables are a guide of which booklet contains which trade. The booklets are in two series: 'A'-series for trades with syllabi based on NBTE Modular Curricula; and 'B'-series for trades with syllabi based on Modified WAEC Technical/Business syllabi.

A. TRADES BASED ON NBTE MODULAR CURRICULUM SYLLABI

I. ENGINEERING TRADES BOOKLET
   010 Agricultural Equipment and Implements Mechanics’ Work.
   030 Auto Electrical Work.
   040 Electrical Installation and Maintenance Practice.
   050 Fabrication and Welding.
   060 Mechanical Engineering Craft Practice.
   070 Radio, TV and Electronic Work.
   080 Refrigeration and Air-conditioning Practice.
   090 Vehicle Body Building.
   100 Light Vehicle Body Repair Work.
   110 Instrument Mechanics Work.
   120 Appliance Maintenance.

II. CONSTRUCTION TRADES BOOKLET
   210 Bricklaying, Blocklaying and Concrete Work.
   220 Carpentry and Joinery.
   230 Furniture making.
   240 Machine Woodworking.
   250 Painting and Decorating.
   260 Plumbing and Pipe Fitting.

III. MISCELLANEOUS TRADE BOOKLET
   310 Cosmetology.
   340 Catering Craft Practice.
   350 Leather Trades.
   360 Printing Craft Practice.
   370 Textile Trades.
   380 Graphic Arts.

IV. BUSINESS STUDIES BOOKLET
   410 Secretarial Studies.
   420 Book-keeping.

B. TRADES BASED ON MODIFIED WAEC TECHNICAL AND BUSINESS SYLLABI

I. ENGINEERING TRADES BOOKLET
   670 Mechanical Engineering Craft Practice Parts I and II.
   680 Refrigeration and Air-conditioning Practice.
   690 Welding Craft Practice, Parts I and II.
   710 Fabrication Engineering Craft Practice, Parts I and II.
   720 Radio, Television and Electronics Servicing.
   730 Electrical Installation Work, Courses B and C.
   740 Telecommunication Technicians, Part I.
   750 Telecommunication Technicians, Part II.
   760 Motor Vehicle Mechanics Parts I and II.
   770 Vehicle Body Building.
   780 Electrical Engineering Practice.

II. CONSTRUCTION TRADES BOOKLET
   790 Furniture, Craft and Advanced Craft.
   900 Concrete Practice.
   910 Carpentry and Joinery, Craft and Advanced Craft.
   920 Machine Woodworking, Craft and Advanced Craft.
   930 Painters’ and Decorators’ Work, Craft and Advanced Craft.
   930 Machine Woodworking, Craft and Advanced Craft.
   940 Concrete Technology and Construction.
   980 Blocklaying and Concreting, Craft and Advanced Craft.
   990 Plumbing, Craft and Advanced Craft.

III. MISCELLANEOUS TRADES BOOKLET
   950 Hotel and Catering – Basic Course.
   960 Hotel and Catering – Craft Course.
   970 Agricultural Mechanics’ Certificate.

IV. BUSINESS STUDIES BOOKLET
   510 Business Studies (Ordinary Level).
   520 Business Studies (Advanced).
Nigerians in South Africa speak on Buhari, Ramaphosa’s proposed meeting, xenophobic attacks

Explosion Fake News. FG debunks Abuja explosion report, blames desperate opposition

Nigerian Guardian 05:29 Explosion Fake News. Nigeria, the most populous African country (with a population of over 182 million in 2015), is nearly equally divided between Christianity and Islam, though the exact ratio is uncertain. The majority of Nigerian Muslims are Sunni and are concentrated in the northern region of the country, while Christians dominate in the south. Most of Nigeria's Christians are Protestant (broadly defined) though about a quarter are Catholic. Media Nigeria gives you precise and current information, events, facts, news in Nigeria and around the world, get informed, get it right, get it now! Bruce Coville “Withholding information is the essence of tyranny. Control of the flow of information is the tool of the dictatorship.”

Samuel Johnson, The Rambler “Men more frequently require to be reminded than informed.”
