A newly discovered fish fossil is the earliest known creature with what might be recognized as a face. *Entelognathus primordialis* was an ancient fish that lived about 419 million years ago in the Late Silurian seas of China. The finding, detailed Sept. 25 in the journal *Nature*, provides a link between two groups of fishes previously thought to be unrelated, challenging long-held notions of how vertebrate faces evolved. In the Silurian seas of present-day China, an armored fish flashes its remarkable jaws. (Brian Choo).
