Liposomes

a practical approach

Edited by

R R C New

Liverpool School of Tropical Medicine, Pembroke Place, Liverpool L3 5QA, UK

Current address: Biocompatibles Ltd, Brunel Science Park, Kingston Lane, Uxbridge, UB8 3PQ, UK

Contents

| | |
|--|-----------|
| ABBREVIATIONS | xv |
| 1. INTRODUCTION | 1 |
| R.R.C.New | |
| Aim of Book | 1 |
| Structure of Liposomes | 1 |
| Chemical constituents | 3 |
| Physical structure | 23 |
| Tailoring Liposomes to Specific Applications | 27 |
| Considerations related to liposome content | 27 |
| Considerations related to the desired behaviour of liposomes | 29 |
| Tailoring Applications to Specific Liposomes | 29 |
| Natural targeting | 30 |
| Directed targeting | 31 |
| Guide to Following Chapters | 31 |
| 2. PREPARATION OF LIPOSOMES | 33 |
| R.R.C.New | |
| Introduction | 33 |
| Handling of Lipids | 33 |
| Storage | 33 |
| Measurement | 34 |
| Drying down | 34 |
| Methods of Preparation | 36 |
| Mechanical dispersion | 36 |
| Hand-shaken multilamellar vesicles | 37 |
| Non-shaken vesicles | 39 |
| Pro-liposomes | 40 |
| Freeze-drying | 42 |
| Micro-emulsification liposomes (MELs) | 43 |
| Sonicated vesicles (SUVs) | 44 |
| French pressure cell liposomes | 48 |
| Membrane extrusion liposomes | 52 |
| Dried-reconstituted vesicles (DRVs) | 56 |
| Freeze-thaw sonication (FTS) method | 58 |
| pH-induced vesiculation | 60 |
| Calcium-induced fusion | 61 |
| Solvent dispersion | 62 |
| Ethanol injection | 63 |
| Ether injection | 64 |
| Water-in-organic phase | 66 |
| Double emulsion vesicles | 67 |
| | ix |

| | |
|---|-----|
| Cell-size vesicles | 69 |
| Multivesicular liposomes (MVLs) | 70 |
| Reverse-phase evaporation vesicles (REVs) | 71 |
| 'Stable plurilamellar vesicles' (SPLVs) | 74 |
| Detergent solubilization | 75 |
| Bile salt preparations | 79 |
| Alkyl glycoside dialysis | 84 |
| Triton X-100-solubilized Sendai virus particles | 85 |
| Active Loading | 90 |
| Purification of Liposomes | 90 |
| Column chromatographic separation | 91 |
| Dialysis | 92 |
| Centrifugation of liposomes | 94 |
| Fractionation of Liposomes | 97 |
| Preparation Methods According to Liposome Type | 98 |
| MLVs | 98 |
| SUVs | 98 |
| IUVs and LUVs | 99 |
| Stability of Liposomes | 99 |
| Prevention of chemical degradation | 100 |
| Prevention of physical degradation | 101 |
| Preparation of Sterile Liposomes | 102 |
| References | 103 |

3. CHARACTERIZATION OF LIPOSOMES **105**

R.R.C.New

| | |
|--|-----|
| Introduction | 105 |
| Chemical Analysis | 105 |
| Quantitative determination of phospholipid | 105 |
| Thin-layer chromatography of lipids | 109 |
| Quantitation of lysolecithin: densitometry | 112 |
| Estimation of phospholipid oxidation | 113 |
| Analysis of cholesterol | 122 |
| Quantitation of α -tocopherol: HPLC | 124 |
| Properties of Intact Liposomes | 125 |
| Determination of percentage capture | 125 |
| Determination of percentage release | 128 |
| Determination of entrapped volume | 137 |
| Lamellarity | 137 |
| Size Determination of Liposomes | 139 |
| Negative stain electron microscopy | 140 |
| Sizing by photon correlation spectroscopy (laser light scattering) | 154 |
| References | 160 |

| | |
|--|------------|
| 4. COVALENT ATTACHMENT OF PROTEINS TO LIPOSOMES | 163 |
| F.J.Martin, T.D.Heath and R.R.C.New | |
| Introduction | 163 |
| SPDP method | 165 |
| Reagents | 165 |
| Procedure | 165 |
| Modifications of the SPDP Method When Using SMPB | 168 |
| Factors Affecting Conjugation Efficiency | 169 |
| Concentration of reduced protein and lipid | 169 |
| Presence of cholesterol in the liposome membrane | 170 |
| Aggregation during conjugation | 170 |
| Comparison of Protein Thiolation Methods | 171 |
| SAMSA/SATA modification of proteins | 172 |
| Comparison of Liposome Thiolation Methods | 173 |
| Derivatization of Liposomes <i>in situ</i> | 173 |
| Thio-derivatives | 173 |
| Formation of carbonyl groups | 174 |
| Alternative Conjugation Procedures | 176 |
| Employing liposomal carboxyl groups | 176 |
| Employment of protein-bound carboxyl groups | 179 |
| Non-protein Conjugates | 181 |
| Anchor Groups Other Than PE | 182 |
| References | 182 |
| | |
| 5. PHYSICAL METHODS OF STUDY | 183 |
| G.R.Jones and A.R.Cossins | |
| Introduction | 183 |
| Fluorescence Techniques in Liposome Research | 184 |
| Fusion of liposomes | 184 |
| Membrane fluidity | 186 |
| pH of the liposome lumen | 193 |
| Membrane potential | 194 |
| Principles Behind the Use of Fluorescence Techniques | 195 |
| Basic Techniques and Their Applications | 197 |
| Instrumentation | 197 |
| Cuvette care | 198 |
| Fluorescent probes | 199 |
| Reagents and lipids | 201 |
| Spectral changes | 201 |
| Quenching | 202 |
| Excimer formation | 203 |
| Energy transfer | 204 |
| Polarization of fluorescence | 205 |

| | |
|---|------------|
| Advanced Techniques | 211 |
| Time-resolved fluorescence | 211 |
| Measurement of fluorescence lifetimes and time-resolved fluorescence anisotropy | 212 |
| Measurement of liposome diffusion processes in the microsecond to second time-scale | 217 |
| Light Scattering By Liposomes | 217 |
| Apparent absorption | 217 |
| Scattered light | 218 |
| Instrumentation | 219 |
| References | 219 |
| 6. LIPOSOMES IN BIOLOGICAL SYSTEMS | 221 |
| R.R.C.New, C.D.V.Black, R.J.Parker, A.Puri and G.L.Scherphof | |
| Introduction | 221 |
| Interactions of Liposomes with Cells | 221 |
| Cellular interactions | 221 |
| Anatomical considerations | 225 |
| Site-selective delivery of liposomal contents—determination by liposome composition | 228 |
| Use of Markers to Determine Fate of Liposome Components | 231 |
| Differentiation between lipid exchange and association | 231 |
| Differentiation between adsorption and internalization | 232 |
| Differentiation between fusion and phagocytosis | 233 |
| Differentiation between lysosomal and cytoplasmic localization | 234 |
| Cellular availability (differentiation between intact and degraded liposomes) | 235 |
| Whole body distribution | 236 |
| Retrieval of Liposome Components | 237 |
| Isolation from plasma | 237 |
| Tissue fractionation | 239 |
| Subcellular fractionation | 243 |
| References | 251 |
| APPENDIX I Miscellaneous methods | 253 |
| Purification of Solvents | 253 |
| Purification of Egg Yolk Phosphatidyl Choline | 253 |
| Recrystallization of Cholesterol | 255 |
| Purification of Carboxyfluorescein | 255 |
| Liposome Extraction Methods | 256 |
| Preparation of Sendai Virus | 258 |
| Hydrogenation of Lecithin | 259 |
| Preparation of <i>N</i> -Hydroxysuccinimide Esters of Fatty Acids | 261 |
| Preparation of Cholesterol Alkyl Ethers | 261 |
| Preparation of Samples for Liquid Scintillation Counting | 262 |

| | |
|--|------------|
| Labelling of Pre-formed Liposomes with ^{99m}Tc | 264 |
| Paper Chromatography of Labelled Liposomes | 265 |
| Radio-iodination of Cholesterol Aniline: ICl Method | 265 |
| APPENDIX II Manufacturers and Suppliers | 267 |
| APPENDIX III Standard Texts on Liposomes and Phospholipid Membranes | 279 |
| APPENDIX IV Key References for Applications of Liposomes | 281 |
| INDEX | 291 |
