Content Reviewer. Rishi Desai, MD, MPH. Author. Viviana Popa. Illustrator. Diabetes mellitus is the most common of the endocrine disorders. It is a chronic condition, characterised by hyperglycaemia and due to impaired insulin secretion with or without insulin resistance. Diabetes mellitus may be classified according to aetiology, by far the most common types being type 1 and type 2 diabetes ( Box 44.1). The final event that precipitates clinical diabetes may be caused by sudden stress such as an infection when the mass of  $\beta$ -cells in the pancreas falls below 5–10%.
