Nuclear medicine techniques in oncology can localise primary tumours, delineate extent of disease, and monitor response to treatment. Radionuclide treatment is used in hyperthyroidism, thyroid cancer, palliation of bone pain, and neural crest tumours. Related Journals of Nuclear Medicine Applications. A radiopharmaceutical is a radioactive drug used for diagnosis or therapy in a tracer quantity with no pharmacological effect. It is composed of two parts; a radionuclide and a pharmaceutical. Journal of Nuclear Medicine & Radiation Therapy is supporting "2nd International Conference on Nuclear Medicine & Radiation Therapy" to be held during July 27-28, 2017 Rome, Italy on the theme: Nuclear Medicine: Future breakthrough in Diagnostics & Treatment.
