Notation	xvii
Preface	xxiii
<b>Chapter 1 Introduction</b>	<b>1</b>
1.1 What Is Fluid Mechanics?	1
1.2 What Good Is Fluid Mechanics?	2
1.3 Basic Ideas in Fluid Mechanics	3
1.4 Liquids and Gases	4
1.5 Properties of Fluids	5
<i>1.5.1 Density / 1.5.2 Specific Gravity / 1.5.3 Viscosity /</i>	
<i>1.5.4 Kinematic Viscosity / 1.5.5 Surface Tension</i>	
1.6 Pressure	16
1.7 Force, Mass, and Weight	19
1.8 Units and Conversion Factors	19
1.9 Principles and Techniques	25
1.10 Engineering Problems	26
1.11 Why This Book Is Different from Other Fluid Mechanics Books	28
1.12 Summary	30
<b>PART I PRELIMINARIES</b>	<b>35</b>
<b>Chapter 2 Fluid Statics</b>	<b>37</b>
2.1 The Basic Equation of Fluid Statics	38
2.2 Pressure-Depth Relationships	40
<i>2.2.1 Constant-Density Fluids / 2.2.2 Ideal Gases</i>	
2.3 Pressure Forces on Surfaces	44
2.4 Pressure Vessels and Piping	47
2.5 Buoyancy	52
2.6 Pressure Measurement	54
2.7 Manometer-like Situations	59
2.8 Variable Gravity	63

2.9	Pressure in Accelerated Rigid-Body Motions	63
2.10	More Problems in Fluid Statics	68
2.11	Summary	69
<b>Chapter 3</b>	<b>The Balance Equation and the Mass Balance</b>	<b>81</b>
3.1	The General Balance Equation	81
3.2	The Mass Balance	84
3.3	Steady-State Balances	86
3.4	The Steady-State Flow, One-Dimensional Mass Balance	87
	<i>3.4.1 Average Velocity / 3.4.2 Velocity Distributions</i>	
3.5	Unsteady-State Mass Balances	91
3.6	Mass Balances for Mixtures	95
3.7	Summary	98
<b>Chapter 4</b>	<b>The First Law of Thermodynamics</b>	<b>103</b>
4.1	Energy	103
4.2	Forms of Energy	104
	<i>4.2.1 Internal Energy / 4.2.2 Kinetic Energy / 4.2.3 Potential Energy / 4.2.4 Electrostatic Energy / 4.2.5 Magnetic Energy / 4.2.6 Surface Energy / 4.2.7 Nuclear Energy</i>	
4.3	Energy Transfer	107
4.4	The Energy Balance	108
	<i>4.4.1 The Sign Convention for Work</i>	
4.5	Kinetic and Potential Energies	110
4.6	Internal Energy	113
4.7	The Work Term	115
4.8	Injection Work	116
4.9	Enthalpy	118
4.10	Restricted Forms	119
4.11	Other Forms of Work and Energy	122
4.12	Limitations of the First Law	125
4.13	Summary	126
<b>PART II</b>	<b>FLOWS OF FLUIDS THAT ARE ONE-DIMENSIONAL, OR THAT CAN BE TREATED AS IF THEY WERE</b>	<b>131</b>
<b>Chapter 5</b>	<b>Bernoulli's Equation</b>	<b>133</b>
5.1	The Energy Balance for a Steady, Incompressible Flow	133
5.2	The Friction-Heating Term	134
5.3	Zero Flow	137
5.4	The Head Form of B.E.	138
5.5	Diffusers and Sudden Expansions	138
5.6	B.E. for Gases	141

5.7	Toricelli's Equation and Its Variants	143
5.8	B.E. for Fluid-Flow Measurements	146
	<i>5.8.1 Pitot Tube / 5.8.2 Pitot-Static Tube / 5.8.3 Venturi Meter / 5.8.4 Orifice Meter / 5.8.5 Rotameters</i>	
5.9	Negative Absolute Pressures: Cavitation	155
5.10	B.E. for Unsteady Flows	158
5.11	Nonuniform Flows	160
5.12	Summary	162
<b>Chapter 6</b>	<b>Fluid Friction in Steady, One-Dimensional Flow</b>	<b>173</b>
6.1	The Pressure-Drop Experiment	174
6.2	Reynolds' Experiment	175
6.3	Laminar Flow	177
6.4	Turbulent Flow	183
6.5	The Three Friction Factor Problems	188
6.6	Some Comments about the Friction Factor Method and Turbulent Flow	193
6.7	More Convenient Methods	194
6.8	Enlargements and Contractions	200
6.9	Fitting Losses	202
6.10	Fluid Friction in One-Dimensional Flow in Noncircular Channels	204
	<i>6.10.1 Laminar Flow in Noncircular Channels / 6.10.2 Seal Leaks / 6.10.3 Turbulent Flow in Noncircular Channels</i>	
6.11	More Complex Problems Involving B.E.	211
6.12	Economic Pipe Diameter, Economic Velocity	214
6.13	Flow around Submerged Objects	220
6.14	Summary	228
<b>Chapter 7</b>	<b>The Momentum Balance</b>	<b>243</b>
7.1	Momentum	244
7.2	The Momentum Balance	245
7.3	Some Steady-Flow Applications of the Momentum Balance	250
	<i>7.3.1 Jet-Surface Interactions / 7.3.2 Forces in Pipes / 7.3.3 Rockets and Jets / 7.3.4 Sudden Expansion / 7.3.5 Eductors, Ejectors, Aspirating Burners, Jet Mixers, and Jet Pumps</i>	
7.4	Relative Velocities	266
7.5	Starting and Stopping Flows	271
	<i>7.5.1 Starting Flow in a Pipe / 7.5.2 Stopping Flow in a Pipe; Water Hammer / 7.5.3 Stopping Flow in an Open Channel; Hydraulic Jump</i>	
7.6	A Very Brief Introduction to Aeronautical Engineering	279
7.7	The Angular-Momentum Balance; Rotating Systems	283
7.8	Summary	285

<b>Chapter 8</b>	<b>One-Dimensional, High-Velocity Gas Flow</b>	296
8.1	The Speed of Sound	297
8.2	Steady, Frictionless, Adiabatic, One-Dimensional Flow of an Ideal Gas	301
8.3	Nozzle-Choking	311
8.4	High-Velocity Gas Flow with Friction, Heating, or Both	313
	<i>8.4.1 Adiabatic Flow with Friction / 8.4.2 Isothermal Flow with Friction</i>	
8.5	Normal Shock Waves	321
8.6	Relative Velocities, Changing Reservoir Conditions	324
8.7	Nozzles and Diffusers	326
8.8	Summary	331
<b>PART III</b>	<b>SOME OTHER TOPICS THAT CAN BE VIEWED BY THE METHODS OF ONE-DIMENSIONAL FLUID MECHANICS</b>	341
<b>Chapter 9</b>	<b>Models, Dimensional Analysis, and Dimensionless Numbers</b>	343
9.1	Models	343
9.2	Dimensionless Numbers	345
9.3	Finding the Dimensionless Numbers	346
	<i>9.3.1 The Method of Governing Equations / 9.3.2 The Method of Force Ratios / 9.3.3 Buckingham's <math>\pi</math> Method</i>	
9.4	Dimensionless Numbers and Physical Insight	356
9.5	Judgment, Guesswork, and Caution	357
9.6	Summary	358
<b>Chapter 10</b>	<b>Pumps, Compressors, and Turbines</b>	360
10.1	General Relations for All Pumps, Compressors, and Turbines	361
10.2	Positive-Displacement Pumps and Compressors	363
	<i>10.2.1 P.D. Pumps / 10.2.2 P.D. Compressors</i>	
10.3	Centrifugal Pumps and Compressors	372
	<i>10.3.1 Centrifugal Pumps / 10.3.2 NPSH / 10.3.3 Centrifugal Compressors</i>	
10.4	Axial Flow Pumps and Compressors	381
10.5	Compressor Efficiencies	382
10.6	Pump and Compressor Stability	384
10.7	Regenerative Pumps	386
10.8	Fluid Engines and Turbines	387
10.9	Fluid Engine and Turbine Efficiency	391
10.10	Summary	391

<b>Chapter 11</b>	<b>Flow through Porous Media</b>	397
11.1	Fluid Friction in Porous Media	398
11.2	Two-Fluid Cocurrent Flow in Porous Media	406
11.3	Countercurrent Flow in Porous Media	409
11.4	Simple Filter Theory	411
	<i>11.4.1 Surface Filters / 11.4.2 Depth Filters</i>	
11.5	Fluidization	414
11.6	Summary	415
<b>Chapter 12</b>	<b>Gas-Liquid Flow</b>	418
12.1	Vertical, Upward Gas-Liquid Flow	419
12.2	Horizontal Gas-Liquid Flow	423
12.3	Two-Phase Flow with Boiling	424
12.4	Summary	425
<b>Chapter 13</b>	<b>Non-Newtonian Fluid Flow in Circular Pipes</b>	428
13.1	The Role of Structure in Non-Newtonian Behavior	428
13.2	Measurement and Description of Non-Newtonian Fluids	429
13.3	Steady Laminar Flow of Non-Newtonian Fluids in Horizontal Circular Tubes	432
	<i>13.3.1 Power Law / 13.3.2 Bingham Plastic</i>	
13.4	Turbulent Steady Pipe Flow of Non-Newtonian Fluids, and the Transition from Laminar to Turbulent Flow	436
	<i>13.4.1 Power Law / 13.4.2 Bingham Plastic</i>	
13.5	Summary	441
<b>Chapter 14</b>	<b>Surface Forces</b>	444
14.1	Surface Tension and Surface Energy	445
14.2	Wetting and Contact Angle	446
14.3	The Measurement of Surface Tension	447
14.4	Interfacial Tension	448
14.5	Forces Due to Curved Surfaces	449
14.6	Some Example of Surface-Force Effects	451
14.7	Summary	455
<b>PART IV</b>	<b>TWO- AND THREE-DIMENSIONAL FLUID MECHANICS</b>	461
<b>Chapter 15</b>	<b>Two- and Three-Dimensional Fluid Mechanics</b>	463
15.1	Notation for Multidimensional Flows	464
15.2	Mass Balances for Multidimensional Flows	464
15.3	Momentum Balances for Multidimensional Flows	466

15.4	The Navier-Stokes Equations	469
	<i>15.4.1 Three Examples of Laminar Flow in a Circular Tube</i>	
15.5	What Good Is All of This?	477
15.6	Euler's Equation, Bernoulli's Equation Again	478
15.7	Transport Equations	479
15.8	Summary	480
<b>Chapter 16</b>	<b>Potential Flow</b>	485
16.1	The History of Potential Flow and Boundary Layer	485
16.2	Streamlines	487
16.3	Potential Flow	488
16.4	Irrotational Flow	496
16.5	Stream Function	500
16.6	Bernoulli's Equation for Two-Dimensional, Perfect-Fluid; Irrotational Flows	504
16.7	Flow around a Cylinder	505
16.8	Separation	508
16.9	Summary	510
<b>Chapter 17</b>	<b>The Boundary Layer</b>	514
17.1	Prandtl's Boundary-Layer Equations	514
17.2	The Steady-Flow, Laminar Boundary Layer on a Flat Plate Parallel to the Flow	515
	<i>17.2.1 Boundary Layer Thickness / 17.2.2 Boundary Layer Drag / 17.2.3 Displacement Thickness / 17.2.4 Momentum Thickness</i>	
17.3	Turbulent Boundary Layers	524
17.4	Turbulent Flow in Pipes	525
17.5	The Steady, Turbulent Boundary Layer on a Flat Plate	529
17.6	The Successes of Boundary-Layer Theory	531
17.7	Summary	533
<b>Chapter 18</b>	<b>Turbulence</b>	539
18.1	Nonmathematical Observations and Descriptions of Turbulence	539
	<i>18.1.1 Decay of Turbulence / 18.1.2 Production of Turbulence / 18.1.3 Free and Confined Turbulent Flows / 18.1.4 Turbulence in the Atmosphere and the Oceans / 18.1.5 Three-Dimensional Turbulence / 18.1.6 The Size of Eddies</i>	
18.2	Why Study Turbulence?	543
18.3	Turbulence Measurements and Definitions	544
18.4	The Experimental and Mathematical Descriptions of Turbulent Flows	546
	<i>18.4.1 Turbulent Intensity / 18.4.2 Turbulent <math>k\epsilon</math> / 18.4.3 Scale of Turbulence / 18.4.4 Correlation Coefficient / 18.4.5 Spectrum of Turbulence</i>	

18.5	Reynolds Stresses	554
18.6	Eddy Viscosity	555
	<i>18.6.1 Finding Eddy Viscosities from Experimental Velocity Distributions / 18.6.2 Finding Eddy Viscosities from Semitheoretical Correlations</i>	
18.7	Turbulence Theories	558
18.8	Summary	558
<b>Chapter 19</b>	<b>Mixing</b>	560
19.1	Types of Mixing Problems	560
	<i>19.1.1 Suspension of Solids / 19.1.2 Dispersion of Solids / 19.1.3 Blending of Miscible Liquids / 19.1.4 Molecular Mixing / 19.1.5 Blending of Solids / 19.1.6 Mixing in Pipes / 19.1.7 Emulsification / 19.1.8 Atmospheric and Oceanic Dispersion</i>	
19.2	The Role of Turbulence	562
19.3	The Role of Molecular Diffusion	562
19.4	Mixing in Stirred Tanks	565
	<i>19.4.1 Power Input to Stirred Tanks / 19.4.2 Required Power Input and Mix Time</i>	
19.5	Mixing in Pipe Flow	569
19.6	Mixing in Turbulent, Cylindrical Free Jets	572
19.7	Mixing in Atmospheric Plumes	574
19.8	Summary	582
<b>Chapter 20</b>	<b>Computational Fluid Dynamics (CFD)</b>	587
20.1	Replacing Differential Equations with Difference Equations	587
20.2	Grids	590
20.3	CFD Equations	591
20.4	Stability	594
20.5	CFD Applications	595
20.6	Summary	596
	<b>Appendixes</b>	
<b>A</b>	<b>Tables and Charts of Fluid Properties, Pipe Dimensions and Flows, and High-Velocity Gas Flows</b>	597
A.1	Viscosities of Various Fluids at 1 atm Pressure	597
A.2	Dimensions of U.S. Schedule 40 Steel Pipe	598
A.3	Flow of Water Through Schedule 40 Steel Pipe	599
A.4	Isentropic Compressible-Flow Tables for $k = 1.4$	601
A.5	Normal Shock Wave Tables for $k = 1.4$	602

<b>A.6</b>	Fluid Densities	602
<b>A.7</b>	Some Properties of Gases	604
<b>A.8</b>	Compressibility Factor	605
<b>A.9</b>	Some Properties of Liquids	606
<b>B</b>	<b>Derivations and Proofs</b>	<b>607</b>
<b>B.1</b>	Proof That in a Fluid at Rest the Pressure Is the Same in All Directions (see Sec. 1.6)	607
<b>B.2</b>	The Hydraulic Jump Equations (see Sec. 7.5.3)	608
<b>B.3</b>	The Properties of an Ideal Gas	609
	<i>B.3.1 Definitions / B.3.2 Isentropic Relations /</i>	
	<i>B.3.3 Entropy Change</i>	
<b>B.4</b>	The Area Ratio (Eq. 8.24, see Sec. 8.2)	612
<b>B.5</b>	High-Velocity Adiabatic Flow with Friction	613
<b>B.6</b>	Normal Shock Waves (see Sec. 8.5)	614
<b>B.7</b>	Equations for Adiabatic, Zero-Clearance, Isentropic Compressors Processing Ideal Gases (see Sec. 9.3)	617
<b>B.8</b>	Proof That the Curves of Constant $\phi$ and the Curves of Constant $\psi$ Are Perpendicular (see Sec. 10.5)	618
<b>C</b>	<b>Equations for Two- and Three-Dimensional Fluid Mechanics</b>	<b>619</b>
<b>C.1</b>	Summary of Vector Notation	619
<b>C.2</b>	The Mass Balance in Three Coordinate Systems	622
<b>C.3</b>	The Momentum Balance for Laminar, Newtonian, Constant-Density Flows (the Navier-Stokes Equations)	622
<b>D</b>	<b>Answers to Selected Problems</b>	<b>624</b>
	<b>Index</b>	<b>629</b>
