Polyurethane (PUR and PU) is a polymer composed of organic units joined by carbamate (urethane) links. While most polyurethanes are thermosetting polymers that do not melt when heated, thermoplastic polyurethanes are also available. Polyurethane polymers are traditionally and most commonly formed by reacting a di- or triisocyanate with a polyol. Since polyurethanes contain two types of monomers, which polymerise one after the other, they are classed as alternating copolymers. Both the isocyanates and Since the first Polyurethanes book was published in 1987, and reprinted with updates in 1990, the world of polyurethanes has changed dramatically. This edition has been completely re-structured, re-written and enlarged by approximately 50%. It provides a greater focus on the whole range of components used to produce polyurethanes, a more detailed analysis of environmental issues and extended views on the applications for polyurethanes. As with the previous editions, this book provides a comprehensive survey of these remarkable materials, again presented in a readable manner, and continues to p
